Summary

I build TypeScript products with clients, from the first conversation through the interface, API and release. I bring that same hands-on approach to AI-assisted workflows: give tools clear boundaries, review what they do, and keep the result understandable to the team that will own it.

Skills

- TypeScript · React · Next.js
- API design · tRPC · PostgreSQL
- MCP integrations · AI-assisted development
- Docker · CI/CD · release verification
- Client discovery · cross-functional delivery

Professional Experience

Founder / Product Engineer / Systems Lead

Technomancy IT LLC

2015 - Present

- Build TypeScript products with clients, from discovery and interface design to typed APIs, release and support.
- Built access-controlled MCP and SaaS integrations; handled full-stack work and DevOps support alongside a client data science team.

Senior Systems Engineer / Datacenter Architect

Front Range Internet Inc.

2015 - 2020

- Ran the NOC, took engineering escalations and documented operating and recovery procedures the team could use.
- Supported web services and migrated workloads from Hyper-V and VMware ESXi into Docker and Kubernetes.

Systems / Software Engineer

Office Evolution

2014 - 2015

- Built SQL- and MongoDB-backed applications connecting CRM, provisioning, onboarding and service operations. Worked across departments to make handoffs explicit.

Network & Systems Engineer

PlumChoice / Everon

2012 - 2014

• Built diagnostic tools for recurring support issues and worked directly with managed-service clients on networks, systems and escalations.

Infrastructure and Systems Focal

IBM

2010 - 2012

• Coordinated application and infrastructure changes across teams, automated audit and backup workflows and managed shared virtualization test labs.

Selected Projects

ProofMark · Document signing

Completed client contribution

• Designed a signing workflow across identity, routing, PDF fields and audit history, with React, tRPC and PostgreSQL. Kept verification and fallback states explicit.

Kerf · TSX framework for people and coding agents

Independent project

Early development

• Built a compiler-backed UI framework with fine-grained DOM updates. Diagnostics explain mistakes a developer or agent can make when TSX looks familiar but the reactivity works differently.

Technomancy · Client support platform

Founder-built product

• Built a Next.js and PostgreSQL operating layer for tickets, CRM, scheduling and billing. Tenant-aware services distinguish client operations from internal work.
